RECEPTION VERIFICATION

DEAR BILL BURROWS,

I am please to confirm your reception of WPTR on JANUARY 5TH 1989 at 9:53-10:05 PM HOURS EST.

WPTR is a regional station licensed to the city of Albany, the capital of New York State. We broadcast on 1540 kilohertz fulltime with a news and sports format. Albany is located about 160 miles up the Hudson Valley from New York City.

The transmitter is a Harris MW-50A radiating 50,000 watts into a three tower in-line array consisting of three half wave series fed vertical elements. The signal is directed northeast over eastern New York State and our New England states as well as eastern Canada.

I very much appreciate your DX report. It is gratifying to know that the signal travels out of our immediate area to foreign countries, and parts of the USA. We enjoy hearing from everyone. Thank you and happy DX hunting.

Sincerely,

Steven J. Simons
Chief Engineer
Alabny broadcasting Co., Inc.
